

Transport packaging
for temperature-sensitive drugs

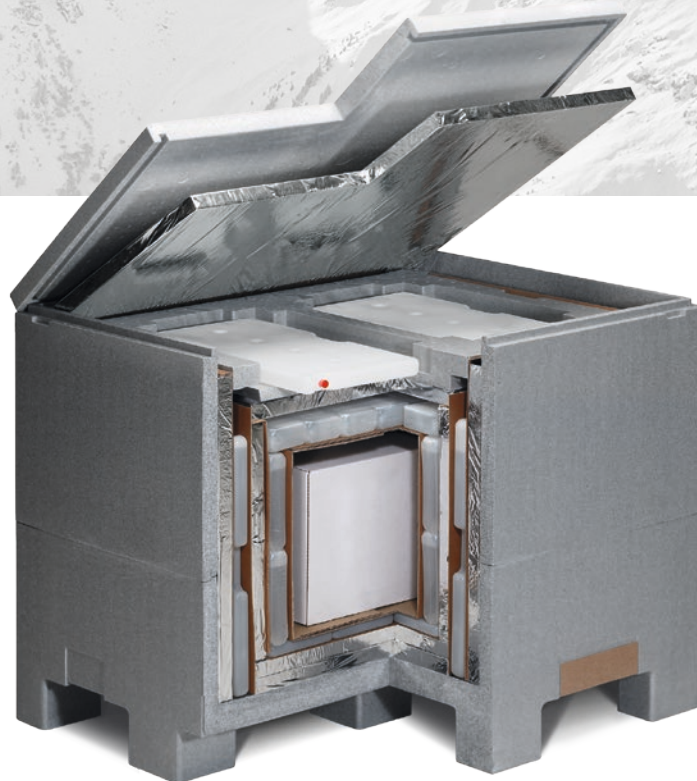

Transport packaging. Swiss made.

Taracell designs and manufactures transport packaging for global medical drug delivery. The packaging solutions of Taracell are equipped with cooling elements using water and ice and devoid of any toxic liquids.

One season pack out

Through the «one season pack out» concept, a constant assembly for all climates is possible. Taracell supplies refrigerated and pre-frozen cooling elements on time in 2-zone thermal trucks.

Clinical Supply Chain

Cold Chain Container High Performance,
Vacuum panels, 2 °C to 8 °C and CRT 15 °C to 25 °C

Commercial Supply Chain

Cold Chain Container TC 144 and TC 288

Middle Performance, 2 °C to 8 °C and CRT 15 °C to 25 °C

Customised Packaging

Insulation and transport packaging, using the thermal protection of particle foam

Last Mile Medication Cooling Kit «tara-cool®2»

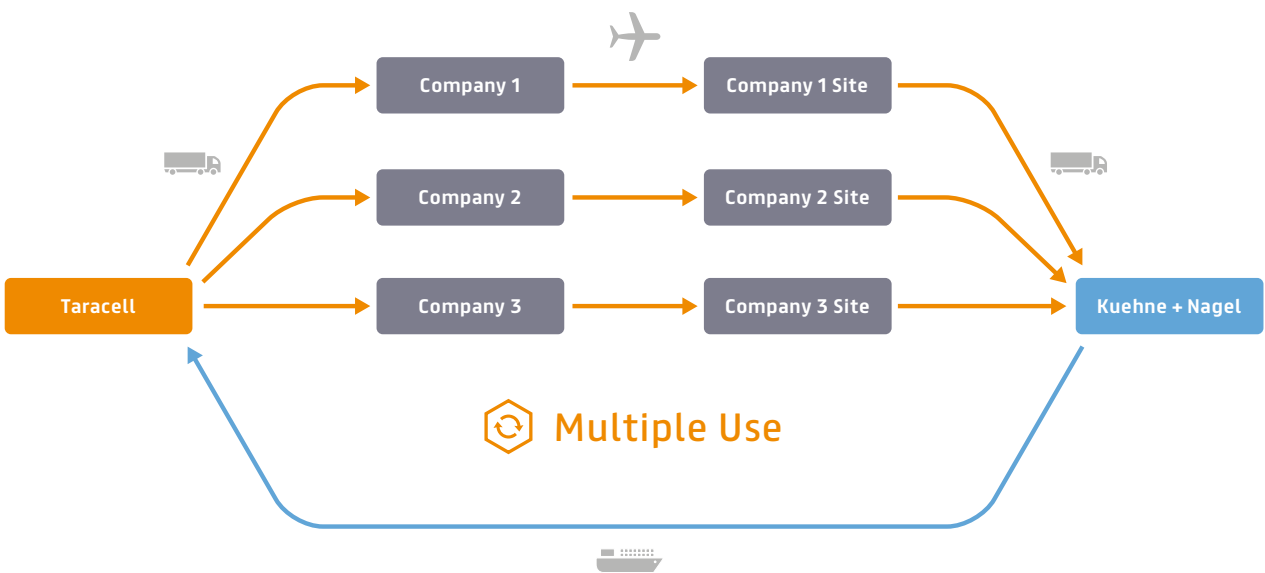

For that last mile between the hospital/
pharmacy to home

Logistics with reusable system

As a responsible packaging manufacturer, Taracell focuses on reusable/returnable protective and transport packaging.

Material tara-foam® E

Tara-foam® E (xEPE) is a crosslink expandable PE particle foam which is expandable in our Taracell facilities in the expected density of 230 g/l down to 25 g/l. The abrasion resistance and breaking elongation, together with very low water absorption, are properties that conventional particle foams don't meet. Thanks to a closed surface (no gore/crotch), the dust-proof and hygienic material is also suitable for various applications in the pharmaceutical, food and watch industry.

Taracell is a Swiss engineering, planning and industrial manufacturing company producing technical mouldings and foam packaging for safety-sensitive global transportation.
